HIGHRES EXPANDS OPERATIONS TO BENEFIT CUSTOMERS

LA JOLLA, Calif., (October 30, 2007) – HighRES, Inc., today announced it has aggressively expanded and enhanced its operations, with increased focus on research and development and customer services. This expansion continues to strengthen HighRES' position as a leading CAD-integrated 3D reverse engineering software provider worldwide.

New personnel will boost corporate management, technical development, and increased customer support with better communication and overall gains in productivity. More dedicated resources in research and development will allow for greater efficiency, compatibility, and an increased competitive advantage in the technologies that HighRES offers. Growth in these areas will considerably enhance the scope of services HighRES is able to offer its current and future customers.

"The customer has always been the driving force at HighRES and will continue to be moving forward", said Christiann Moore, Director. "Following a very strong 2008 and a projected strong 2007, HighRES continues to re-invest in the backbone of the organization. We will continue to improve in these areas to provide support that matches the significance and sophistication of the HighRES solution."

About HighRES, Inc.

HighRES, Inc. headquartered in La Jolla, California, is the leading company dedicated to direct CAD reverse engineering and measurement software solutions worldwide. HighRES currently links portable CMMs directly to 10 popular CAD/CAM software packages and 5 hardware platforms. Developing software solutions since 1985, the company drives its development efforts to bring its unique CAD-

integrated software to the laser, photogrammetry, and tracker market place to anyone, anywhere, anytime, and on any device.
